

GRACE-FO

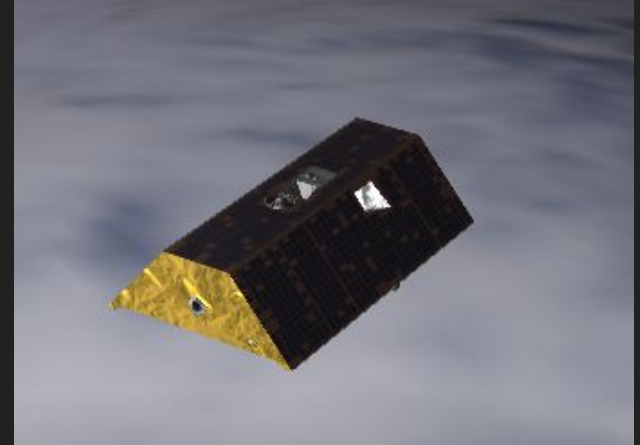

(Gravity Recovery and Climate Experiment Follow On Mission)

By looking at the gravity fields on Earth, we can see how ice is changing on Earth. As of April 2020 we can see that around the pole, the cm of water are significantly higher than in April 2019. This shows a large sea level rise, which we can attribute to climate change .

She has been in orbit for 2 years and 36 days.
